## EDUCATION

**University of California, Irvine, Irvine, CA**

**Fall 2018 - Present**

- B.S Computer Science // GPA: 3.735 // Expected Graduation: Spring 2022
- Campuswide Honors Collegium Student
- Relevant Coursework: Data Structures, Design and Analysis of Algorithms, Computer Organization/System Design, Intro to Data Management, Intro to Artificial Intelligence, Next Generation Search Systems, Machine Learning & Data-Mining, Databases & Web Applications

## SKILLS

- **Languages:** Python, C, C++, Java, x86 Assembly, HTML, CSS, Javascript, Dart
- **Technologies:** MySQL, NodeJS, Express, Flask, MongoDB
- **Graphic Design:** Adobe Photoshop/Lightroom/XD

## WORK EXPERIENCE/LEADERSHIP

**Sapphire Software, LLC, Remote (based in Irvine, CA)**

**April 2021 - August 2021**

*Intern*

- Collaborated with fellow interns to develop components and functions of an all-in-one real-estate **Flutter** app tailored to brokers and agents for both iOS and Android devices
- Implemented the navigation bar and its routing to the different screens
- Implemented the front-end design of the dashboard screens and property screens

**UCI Student Housing, Irvine, CA**

**Sept 2021 - Present**

*Resident Advisor*

- Provided mentorship and supported 90 first-year residents in a STEM-themed hall through community-building activities and conflict resolution meetings
- Planned weekly programs/socials focused on recreation and professionalism to foster a sense of community
- Incorporated Discord to facilitate communication and engagement with residents

**Office of Undergraduate Admissions, Irvine, CA**

**June 2019 - Present**

*Campus Representative*

- Tour-guiding for groups of 20-60 people at a time
- Engaged a variety of audiences through effective public speaking and communication

## PROJECTS

**Mellowweather**

- Collaborated in a team of four in **HackUCI 2021** to create a web application that generates a personalized Spotify playlist based on the current weather and the user's Spotify listening history
- Used **Node.js** with an **Express.js** framework to develop the back-end and implemented three APIs (Spotify, Metaweather, and Positionstack)

**Wellness Notes**

- Developed a web application that uses sentiment analysis and the user's Spotify listening history to recommend songs to either boost or maintain their mood
- Analyzed the user-inputted journal entries with **Microsoft Azure**
- Used **Flask** for back-end development and **MongoDB** to store user information and previous session recommendations

**Fabflix** (academic project)

- Developed a web application that incorporates full-text search through movies based on different parameters -- genres, rating, actors, etc.
- Used **MySQL** to hold over 60,000 pieces of data (including movies, actors, etc.) and used **Java servlets** to interact and connect to this database
- Implemented **MYSQL** replication, connection pooling, and load balancing
- Deployed project versions to **AWS** using **Apache Tomcat**
- Used **HTML**, **CSS**, and **Javascript** for the front-end, and implemented **reCAPTCHA** and **HTTPS** for deployment
